OVERVIEW

Wanderville is a **2D multiplayer farming game** — blending farming, fishing, pets, and social play. Our **126 FRs / 147 user stories** are grounded in **interviews.**

User research most strongly backs **Achievements & Leveling and Farming** (5 FRs each), then **Friends & Social** (4) — confirming progression and farming satisfaction as the core engagement drivers.

> *"I think indie developers usually prioritize making a great game rather than maximizing profit. A lot of indie games start as passion projects, and you can really feel the love and care that's put into every part of the experience."*
>
> *— Discord User (@ak47wow, 27 years old), Interview 8*

Part 1: Farming and Fishing

> *“Farming is honestly just one part of the game. There are townspeople to befriend, caves to explore, fishing, different farm layouts, collections to complete, festivals, and so many little secrets.”*
>
> *— Stardew Valley Community (r/Spiritual-Skill-412), Interview 9*

> *"Farming is satisfying when players can clearly see the results of their effort. I enjoy watching crops grow and waiting for them to become ready for harvesting."*
>
> *— Experienced Gamer (Mohsina Ferdousi, Tired Office Worker)*

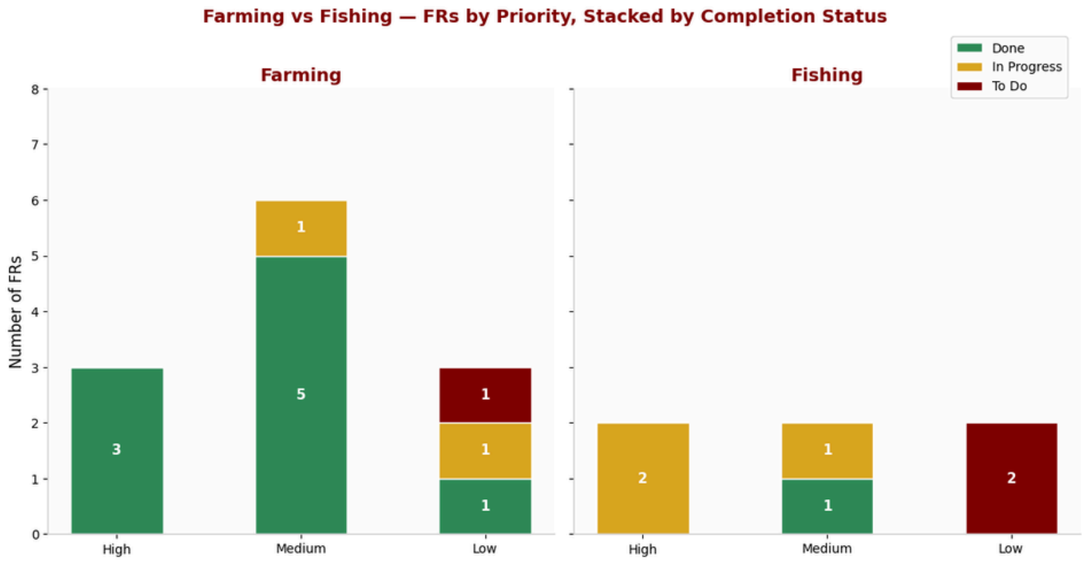

Part 1: Farming and Fishing

4 out of 6

Individual interviews named the plant → grow → harvest loop as their favorite part of a cozy game

1	Every player starts with their own private farm plot.	*FR_18*
2	Water crops and 4 growth stages of each crop	*FR_21/22*
3	Harvest into your inventory, with an animation	*FR_24*
4	Some seeds are season-restricted, so the world stays consistent	*FR_29*
5	Designated fishing spots near lakes to catch fish	*FR_30/31*
6	Rare lake materials like spirit reeds and crystals	*FR_32*

Part 2: Levels and Rewards

"I usually log in to complete daily commissions, spend my Resin, collect rewards, and participate in limited-time events. Even if I don't have much time, I like making a little progress every day."

— Experienced Gamer (Talbia Shinny, 17), Interview 5

"I prefer instant rewards because they make gameplay feel more satisfying. When I complete a task and immediately receive something useful or exciting, it creates a stronger sense of accomplishment."

— Experienced Gamer (Mohsina Ferdousi), Interview 2

"I really like daily rewards, special gifts, rare pets, and event items. It feels exciting when I finally unlock something I've been working toward."

— Junior Gamer (Jannati Aqsa, 11), Interview 4

Part 2: Levels and Rewards

Featuring our monetary system: **Aura**

1	Starter house on day one; Spend Aura to upgrade its tier and appearance.	*FR_36/37*
2	Automatic tracking, Aura/XP payouts	*FR_62/64/66*
3	A handful of daily tasks, plus rare surprises.	*FR_70/73*
4	Aura is the currency earned by selling crops, spent in a shop.	*FR_50/52/54*
5	A cute companion to tag along as you roam in the game	*FR_48/49*

Part 3: Multiplayer

"I don't have many friends in real life because I'm a bit shy. Most of the people I play with are friends I met in Roblox."

— Junior Gamer (Jannati Aqsa, 11), Interview 4

"I sometimes play in co-op mode with my friends. We fight bosses together, help each other farm materials, and explore different areas."
"It's fun because difficult battles become easier, and it's more enjoyable to grind when you're talking and playing with friends."

— Experienced Gamer (Talbia Shinny, 17), Interview 5

"Since I live alone, Animal Crossing provides a simple form of social interaction. Talking with villagers and caring about their daily lives gives me a sense of connection without requiring the effort that real-life social situations sometimes require."

— Animal Crossing Community (u/JWJulie , reddit user)

"The biggest reason was that it was an online game where I could play and communicate with my friends. We could all join together, talk while playing, and have fun as a group."

— Experienced Gamer (Muntahi Hasan Akhiar, 21), Interview 7

Part 3: Multiplayer

1	Search for players by name and send friend requests	*FR_80*
2	Accept or decline incoming friend requests	*FR_81*
3	See which friends are online, or their last-online time	*FR_88/91*
4	Visit a friend's farm - or walk their entire map	*FR_82/89*
5	Real-time shared-world movement, so the game feels alive	*FR_93*
6	Send gifts to friends via mailbox that claim them anytime	*FR_94*
7	Direct message a friend and invite them to your farm	*FR_99/92*

Part 4: Visual Effects and World System

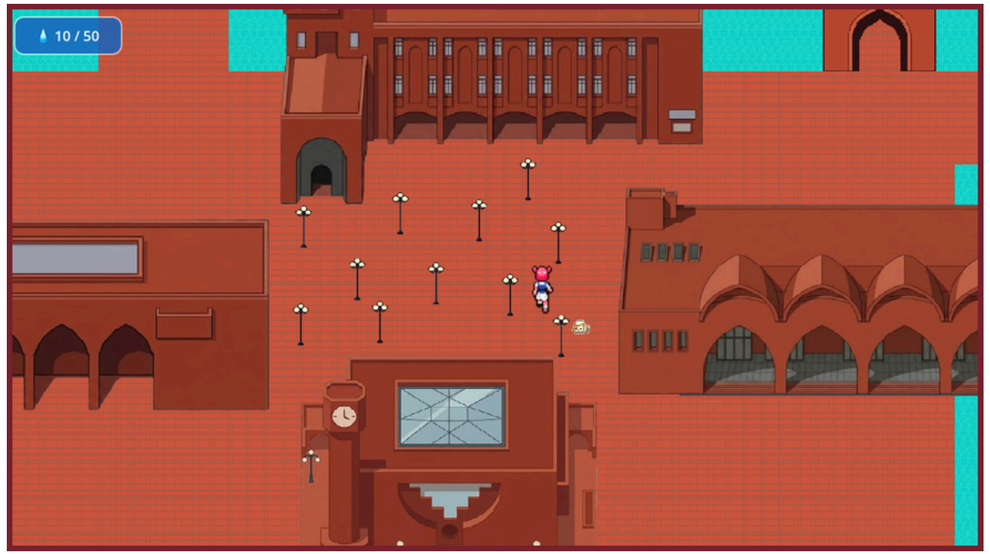

"Comfort is probably the biggest one. It's cozy, relaxing, and the world feels welcoming. The music, characters, and atmosphere make it feel like somewhere I genuinely enjoy spending time."

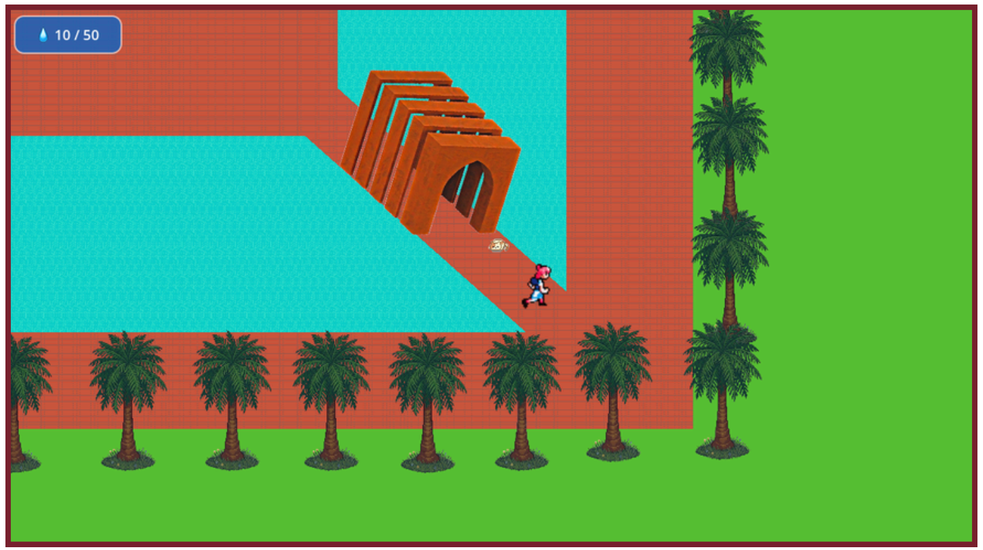

— StardewValley Community (u/MsHarpsichord), Interview 9

"This game gives me a world where everything feels peaceful and possible. I can explore endlessly, interact with friendly characters, and create without limitations."

— Animal Crossing Community (u/JRyuu), Interview 10

Part 4: Visual Effects and World System

1	Day/night cycle — lighting shifts gradually	*FR_58*
2	Four seasons in a fixed cycle, changing crops and visual effects	*FR_57/61*
3	Dynamic weather — clear, rain, or snow, each with its own effect	*FR_59*
4	Directional idle & action animations make characters feel alive	*FR_103-105*

Part 5: Authentication and Persistency

1	Create an account with a unique username, email & password	*FR_3*
2	Clear error messages for duplicate username or email	*FR_3*
3	Log in as a returning player with username & password	*FR_4*
4	A clear error message on failed login	*FR_5*
5	Option to “stay logged in” which skips re-entering a password	*FR_6*
6	Log out from the menu, with a confirmation step first	*FR_7*

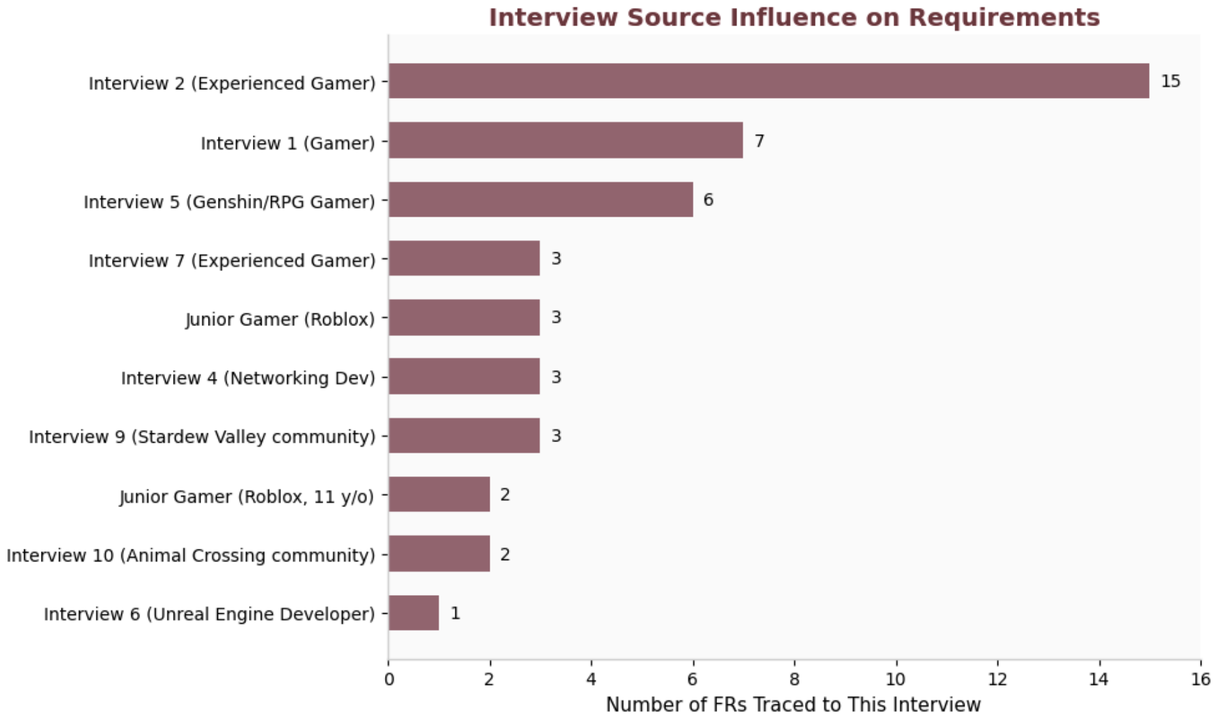

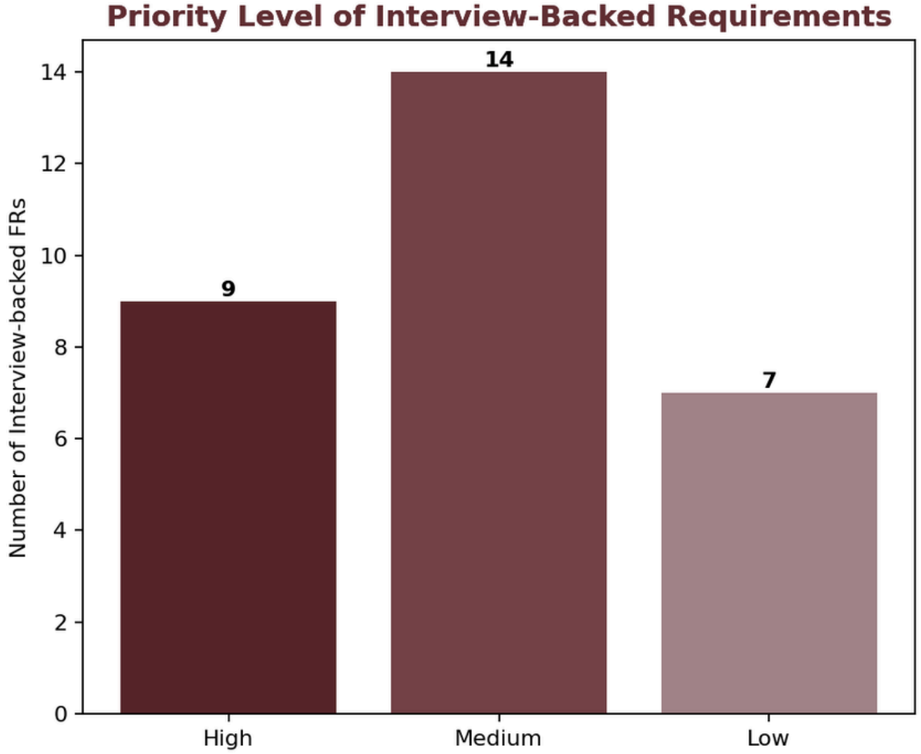

Appendix

How We Gathered These Requirements

1	**Interview-Based Elicitation (Direct Stakeholder Engagement):** Gathered qualitative insights on player motivation, feature preferences, pain points, and technical feasibility.
2	**System & Competitive Analysis (Observation of Existing Systems):** Identified genre conventions, successful game play loops, progression systems to inform our own FRs and USs.
3	**Community & Forum Mining (Passive User Research):** Captured unfiltered, organic user sentiment and validated interview findings against real community discourse.
